Mert

Hi Ahmet! I want to give books that you need. Can you share your location?

5 minutes ago

Ahmet

Hi Mert, Thank you! My students will be really happy :)

5 minutes ago

Location Requested

Mert send you location request. Would you like to share location?

Sub-Systems Interface Design

Quality Requirements

- **Reusability:** I-Need's coding will be done rigorously. Design will be open for extension for any new futuristic in the future.
- **How to achieve:** We use polymorphism, encapsulation, and inheritance precisely throughout our project.
- **Example:** 'AcceptNeed', and 'ApproveNeed' will be derived from 'Need' super class.
- **Maintainability:** I-Need repairment will be done in a breeze. Since our concern is the society, our design will not accept any kind of fault or errors.
- **How to achieve:** We assign each subsystem with one particular job to keep our code healthy. Therefore, we will know where is the problem when it occurred.
- **Example:** 'SelectNeed' class will only be used for selecting among searched criteria.

Quality Requirements

I-Need
What You Need

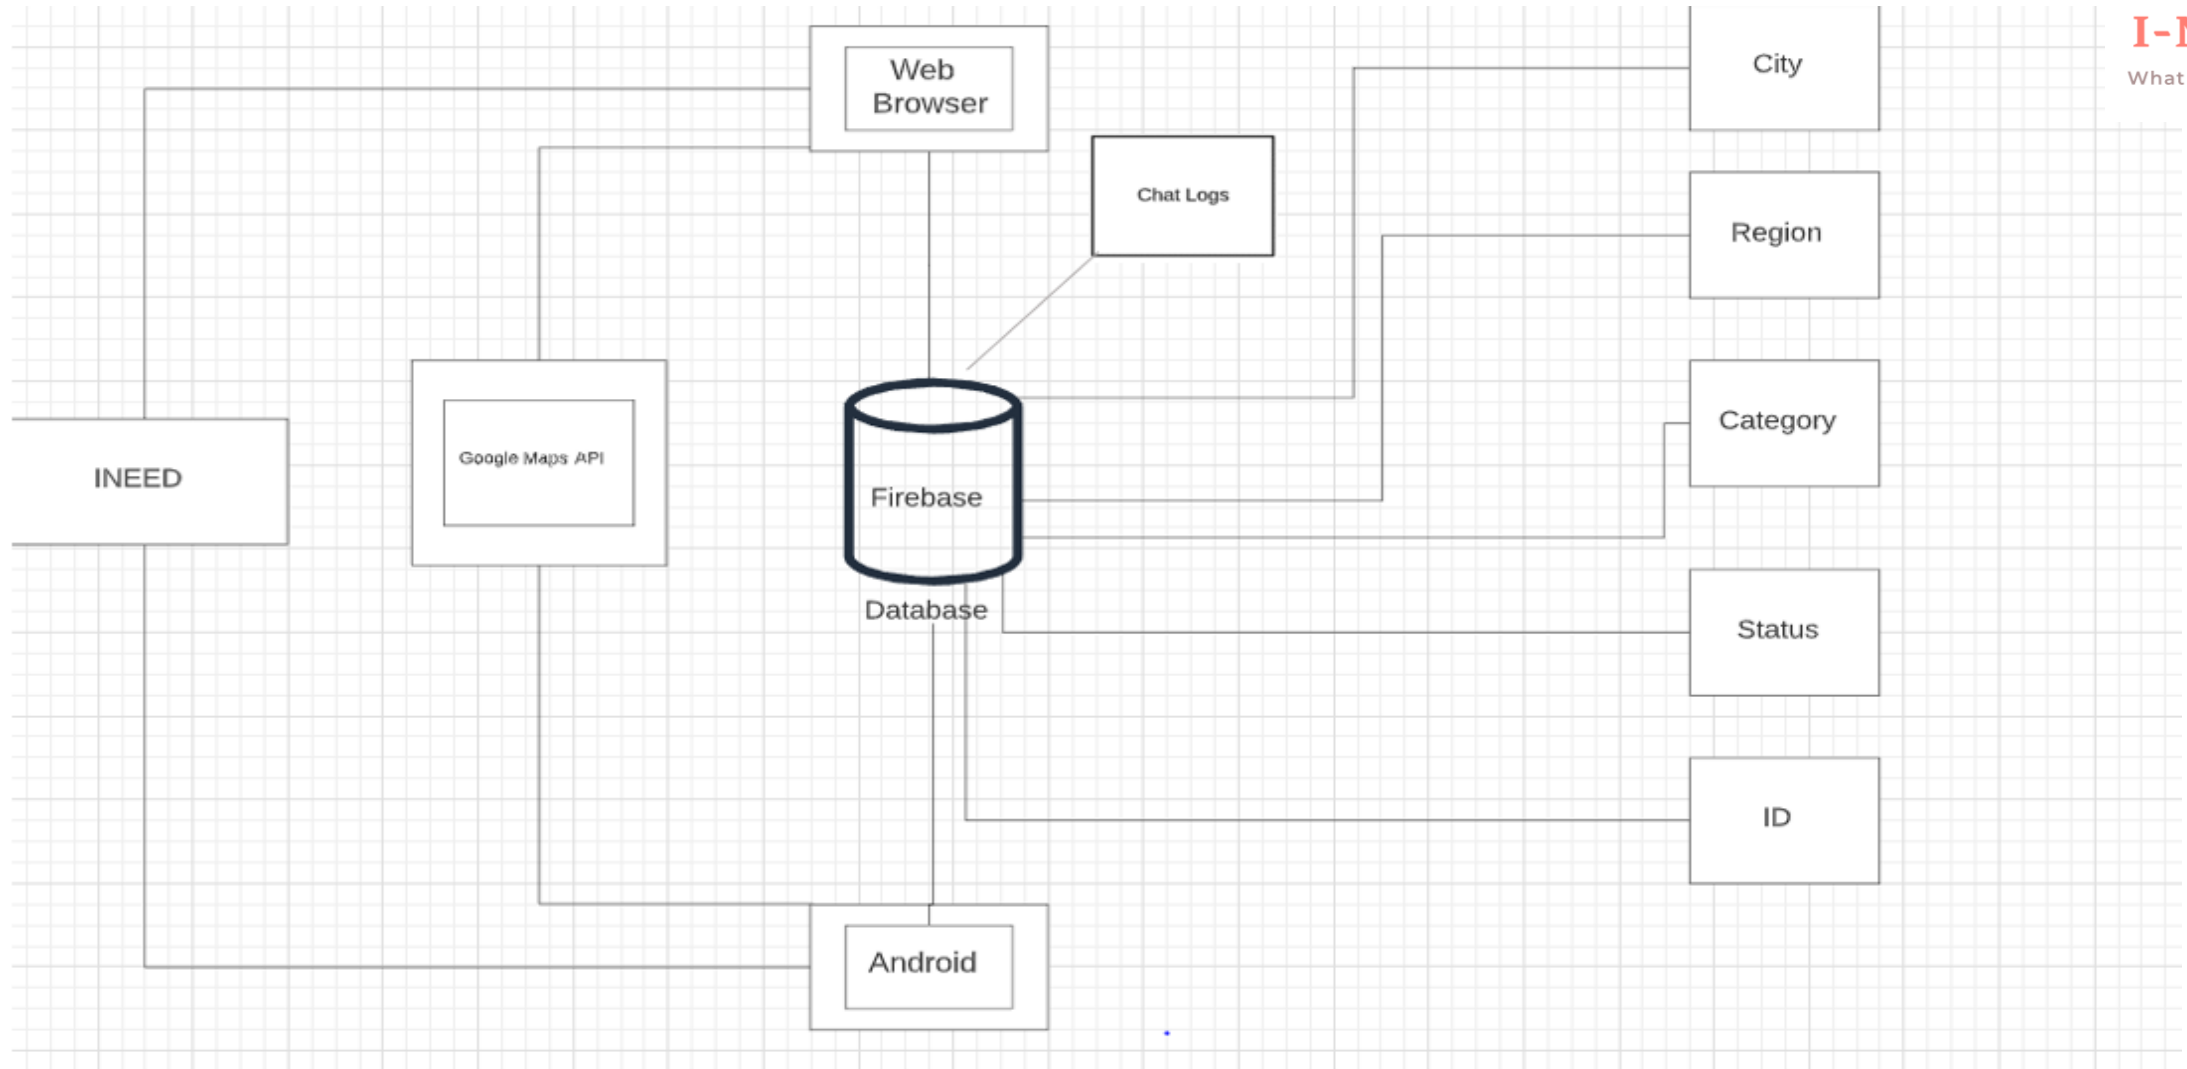

Our design will also implement other non-functional requirements:

- **Availability:** Our program shall be available 99% of the time.
- **Portability:** Our code should be able to transferable to other platforms.
- **Extensibility:** Our code provides enhancements without impairing existing system functions.
- **Usability:** Our program's GUIs will be user-friendly

Product & Process Metrics

I-Need
What You Need

PUM (Problems per User-Month)

- It measures the problems that users encounter when using the product.
- It will contain the users' perspective towards the problem.
- Will be calculated monthly.
- Includes the non-defect-oriented problems & defect problems.
- For monitoring purposes.

The equation that we are going to use:

$$\text{PUM} = \frac{\text{Defect} + \text{Non-Defect oriented problems (for a determined time)}}{\text{Total number of license months of the software during the period.}}$$

Where,

Number of license month of the software = Number of install license of the software * Number of months in calculation period.

Product & Process Metrics

I-Need
What You Need

BMI (Backlog Management Index)

- Related to the rate of defects arrivals and rate at which fixes for reported problems become available.
- Count of reported problems that remain at the end of each month.
- For managing(control) and maintenance processes.

BMI = Number of problems closed during the month / Number of problems arrived during the month * 100

As a percentage result.

- If BMI is higher than 100 backlogs are reduced.
- If BMI is lower than 100 backlogs are increased.
